^aHead of Saudi Family Medicine Board, KSA

^bUniversity of Al Jouf, KSA

^cUniversity of Tabuk, KSA

Stroke is known worldwide as the leading cause of premature death and disability. Developing countries are most exposed to the dual burden of infectious and non-communicable diseases. Poor people are increasingly affected by stroke due to changing risk factors in the population and, most tragically, not being able to afford the high costs of stroke treatment. Despite significant improvements in primary prevention and acute care over the last few decades, stroke remains a catastrophic illness. Unchangeable risk factors for stroke are some established and changeable risk factors for age, gender, race, ethnicity, heredity, and ischemic stroke.

Biography

Saqer Bulayhid H. Albulayhid done Graduation from Medical School of Jouf University in the year 2021 and also he got excellence academic achievement. Presently he is working as Neurology resident in king Saud Medical City, Riyadh, Saudi Arabia.
