

Translation of evidence into nursing leadership & management

Abdulqadir J. Nashwan

Hamad Medical Corporation, Qatar

Abstract:

In the past, nurses used to provide clinical care, even though no substantial evidence supported this practice following basic logical assumptions. Usually, health care providers (HCPs) including nurses often follow outdated policies and procedures without questioning their current practices in terms of accuracy, safety, feasibility, and applicability. This presentation aims to provide an overview of the applications of translating evidence on leadership and management. Nurses are collaborating with other healthcare providers to develop new and innovative ways to translate evidence into practice to provide the best quality of care while maintaining the highest levels of safety standards. Nursing leaders need to build the infrastructure (policies, processes, resources, etc.) for transfer of knowledge into practice through empowering environment for nurses. Nursing leaders/managers face increasing demands to provide expertise in implementing evidence-based nursing care to meet the healthcare needs of diverse patient populations.

Biography:

Abdulqadir Nashwan is a Director of Nursing for Education and Practice Development at HMGH a member of Hamad Medical Corporation (HMC) in Qatar. As well as a Senior Adjunct Instructor at the faculty of nursing at the University of Calgary in Qatar (UCQ). His current research interests include Research Utilization, Evidence-Based Practice, Hematology/Oncology, Nursing Informatics, and Cancer Immunotherapy. Mr. Nashwan

has published more than 50 research articles in reputable peer-reviewed journals. In November 2015, he received the Award of Merit for Placing HMC at the Cutting Edge of Cancer Research as a part of Stars of Excellence Program introduced by HMC. In October 2016, Mr. Nashwan completed a Cancer Biology & Therapeutics (CBT) Program; provided by Harvard Medical School (HMS).

Publication of speakers:

1. Nurses' perceptions regarding using the SBAR tool for handoff communication in a tertiary cancer center in Qatar
2. Pulmonary Hypertension Induced by Thalidomide (and Derivatives) in Patients with Multiple Myeloma: A Systematic Review
3. Is Ferriscan-a Useful Tool for Diagnosing and Monitoring Tissue Iron Load after Acute Iron Intoxication?
4. Is Adherence to Imatinib Mesylate Treatment Among Patients with Chronic Myeloid Leukemia Associated with Better Clinical Outcomes in Qatar?
